**Dimensions in mm and informative, subject to alterations.**

**Standard lid included**

**IMPORTANT: Installation in consolidated sand**

## CHARACTERISTICS

Sample pits are designed to be installed at the back of a water purification or separator. They have been provided with a type of spoon that is used for taking a sample of the effluent. Before tanking the spoon should be cleaned to remove any collected sludge. The sample pit can be installed on a 110 or 125 mm pipe.
